User Manual

FastTaxis Database Application

1. Introduction

The FastTaxis database application is a prototype for managing all aspects of taxi companies utilizing relational database management systems.

Users will be able to view and manage all data related to Taxi Company information, including Taxis, Drivers, Staff, Clients, Jobs, and Maintenance Records.

A web-based interface was developed in conjunction with a MySQL relational database using PHP, HTML, and CSS. The FastTaxis database application has been tested on the local environment of an XAMPP server.

There are different roles that users can assume based on different responsibilities:

- Director
- Staff
- Driver
- Taxi Owner

Once logged into the FastTaxis database application, each user is directed to a Dashboard from which they can access the relevant functions based upon their role as defined by the fastTaxis database application.

2: System Requirements

The system will run in an online environment by using a local Web Server.

Hardware Requirements:

- A computer with an Internet Browser
- Recommended hardware requirements for operating Fast Taxis include at least 4GB of RAM.

Software Requirements:

- Windows OS
- XAMPP Server
- MySQL database

- Internet Browser (Chrome or Edge)

Fast Taxis can be found at the following link: <http://localhost/fasttaxis>.

3. System Login

The login page is the first view that users have of the FastTaxis system as they log into it.

Users must provide their Username and Password to be able to utilize the fasttaxis system.

The Usernames and passwords are contained in the users table within the database.

The process of logging in to the FastTaxis system is as follows:

1. Launch the FastTaxis system in your preferred Web Browser.
2. Input the username
3. Input the password.
4. Click on the "Login" Button.

If the user has input the wrong details for login, the FastTaxis System will display an **Invalid login**.

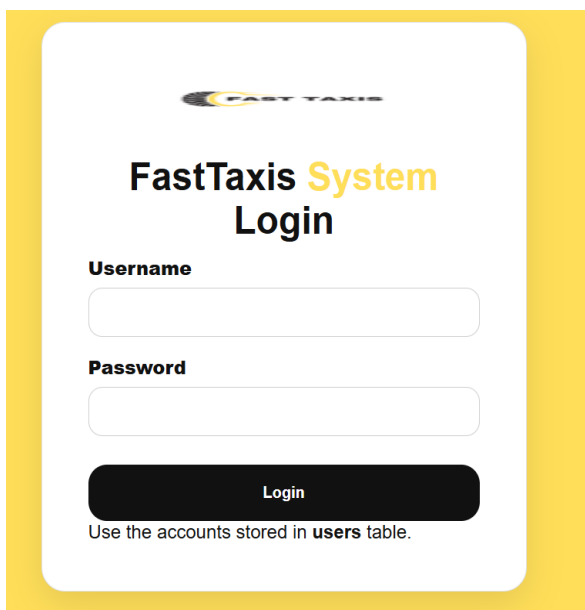

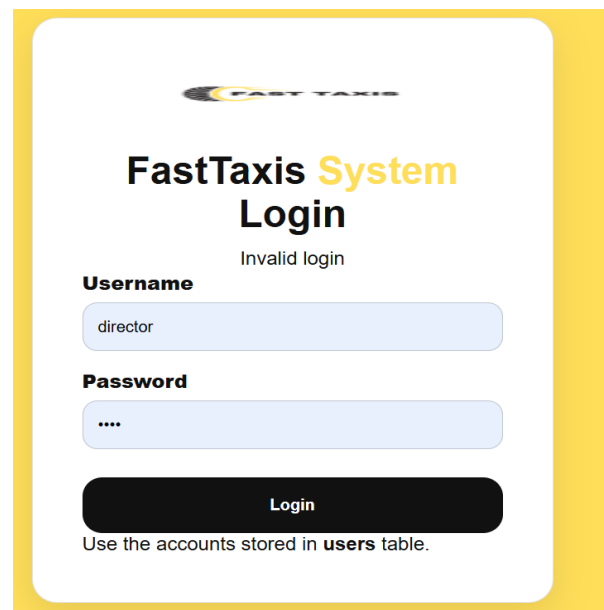

The image shows the FastTaxis System Login page. It features a yellow header with the 'FAST TAXIS' logo. Below the logo, the title 'FastTaxis System Login' is displayed in bold black text. There are two input fields: 'Username' and 'Password', both with light blue borders. A black 'Login' button is positioned below the password field. At the bottom, a note states 'Use the accounts stored in users table.'The image shows the FastTaxis System Login page after an invalid login attempt. The title 'FastTaxis System Login' is still present. Above the 'Username' input field, the text 'Invalid login' is displayed in red. The 'Username' field now contains the text 'director'. The 'Password' field contains four dots '....'. The black 'Login' button remains at the bottom, with the note 'Use the accounts stored in users table.'

Figure 1: FastTaxis System Login Page

figure 2: System displaying invalid login

After successful login, the system redirects the user to their role-specific dashboard.

3. Director Dashboard

The Director is a user with total administrative rights for the system, and can therefore have access to all details within the system after login.

Following a successful login, the director will be automatically routed to the Director Dashboard, which gives directors access to all of the key functional components of the system.

The director dashboard allows the director to review all aspects of the FastTaxis business (offices, staff, taxis, client, jobs and maintenance).

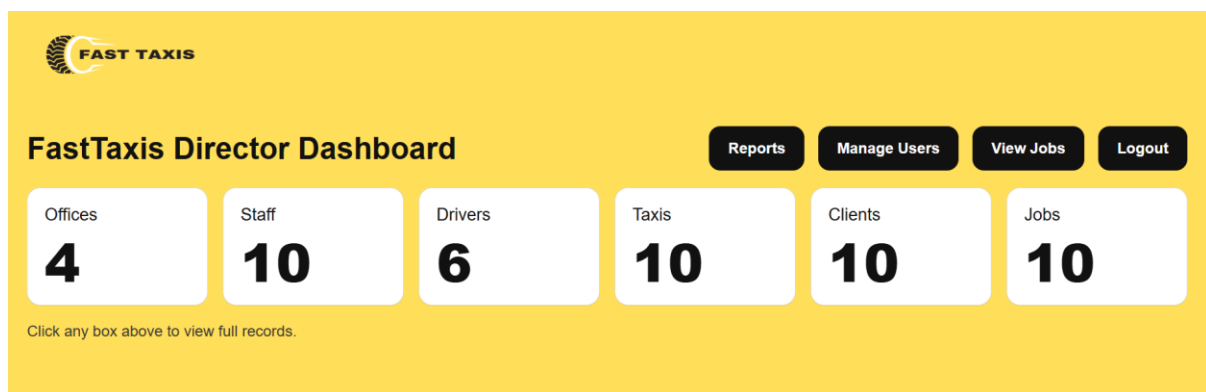

Figure 3: Director Dashboard Interface

3.1 View Offices

The director is able to see every single office that has been added to the FastTaxis database. Information on each of the offices is displayed on a separate page, which includes: Office ID, Office Name, Location, Address, Phone Number

This will allow the director to keep an eye on the different offices being run for the company.

All Offices				
← Back to Dashboard				
ID	Name	Location	Address	Phone
1	Cyberjaya HQ	Cyberjaya	No 10, Jalan Cyber 8, Cyberjaya	03-8000 1000
2	KL Sentral	Kuala Lumpur	Lot 2, KL Sentral, Kuala Lumpur	03-8000 2000
3	KLCC	Kuala Lumpur	No 1, KLCC Road, Kuala Lumpur	03-8000 3000
4	Shah Alam	Selangor	Section 7, Shah Alam, Selangor	03-8000 4000

Figure 4: Office Information Page

3.2 View Staff

The director can also look at every employee that works for the company.

Each employee will have their own page where there are details about them, such as:

Employee ID, First Name, Last Name, Gender, Phone Number, Assigned Office.

This will allow the director to be able to check the employees at each office.

All Staff				
← Back to Dashboard				
ID	Name	Gender	Phone	Office
1	Nani Johar	Female	012-1111111	Cyberjaya HQ
2	Farid Rahman	Male	012-2222222	KL Sentral
3	Aina Salleh	Female	012-3333333	KLCC
4	Haziq Omar	Male	012-4444444	Shah Alam
5	Siti Nora	Female	013-5555555	Cyberjaya HQ

10	Sabri Sam	Male	015-1010101	Shah Alam

Figure 5: Staff Management Page

3.3 View Drivers

The System is designed to allow Directors to view all Registered Drivers.

The Director will be able to see the following Information about each of the Registered Drivers: Driver ID, Driver Name, Current Status, License Number.

This will enable the Director to track both the Availability of Drivers and their Performance.

All Drivers				
← Back to Dashboard				
Driver ID	Name	Status	License	Office

9	Karim Ali	Busy	D-SLG-2001	Shah Alam
10	Sabri Sam	Available	D-SLG-2002	Shah Alam

Figure 6: Driver Information Page

3.4 View Taxis

The Director is also able to view all Taxis currently registered in the system.

On this page, the Director will be able to see the following Information for each registered taxi: Taxi ID, Model of the Taxi, License Plate Number, Details regarding the owner, and details of the assigned office.

This will allow the Director to keep a record of the Vehicles that are being utilized by the Company.

All Taxis

Figure 7: Taxi Information Page

3.5 View Clients

The Director has access to all Clients who have been registered in the System.

A client is either a private individual (Private Client) or a business (Business Client).

The System will provide the Director with the ability to see: Client name, Address, Phone Number, and Email address.

All Clients

3.7 Reports

The FastTaxis System also has an automatic reporting module, allowing the Directors to obtain certain information about the data stored in the database. These reports will be built upon the SQL queries used by the directors to analyze their data.

The reporting capabilities will provide the Directors with tools to study and assess the operational data of the Company and therefore the performance of the taxi company.

3.8 Manage Users

The Manage Users module enables directors to limit who has access to the FastTaxis System by creating user accounts for each of the four roles (DIRECTOR, STAFF, DRIVER, OWNER), as well as the ability to enable or disable user accounts at will.

It is a significant feature of FastTaxis, as only registered users in the Users Table are able to login into the FastTaxis system and therefore gain access to it.

What the Director can do in Managing Users

1) Create a new user account

- Enter a Username
- Enter a Password
- Select a Role (DIRECTOR / STAFF / DRIVER / OWNER)
- If the role is STAFF or DRIVER, the Director can optionally enter the related staffID
- If the role is OWNER, the Director can optionally enter the related ownerID
- Click Create User to save the account in the database

2) View all existing user accounts

The system displays a list of all users including: UserID, Username, Role, staffID / ownerID (if applicable) and Active status.

3) Activate / Deactivate accounts

- The Director can click Toggle Active to enable or disable an account.
- If a user is deactivated, they cannot log into the system until reactivated.

4.2 Manage Clients

The Manage Clients area lets staff create a database entry for each client that is registered with FastTaxis. The FastTaxis program has two different client categories: private and business. Staff use the "Add New Client" data entry screen to enter new client information. All previously entered client data is stored in the Client Tables.

← Back

Manage Clients

Add New Client

Client Type
Private

Phone Number

Email (optional)

Address

After selecting type, fill the related fields below:

Depending on whether you selected Private or Business as the Client Type, the system will display additional fields to complete.

When you select Private as the Client Type, you will need to enter the First Name, Last Name, Date of First Booking, and, if desired, a Notes field for the Client.

When you select Business as the Client Type, you will need to enter the Company Name, Business Registration Number, Contact Person, Fax Number, and City.

The information you enter for each type of client will be saved in either the Private Client table or the Business Client table in the database.

After selecting type, fill the related fields below:

Private fields	Business fields
First Name	Company Name
Last Name	Business Reg Number
Date First Booking mm / dd / yyyy	Contact Person
Notes	Fax Number (optional)
	City

Create Client

Viewing Client Records

When a client has been created, the system will then show all of the registered clients.

The system uses 2 tables for displaying the client's record in 2 different ways: the Private Clients Table & Business Clients Table.

Both tables will contain client information.

When staff members want to edit client information, they are able to do so by clicking on the Edit button.

Private Clients

4.3 Create a Contract

Staff members are able to create contracts for their business clients.

The contract page will allow staff members to enter information about: The Client ID of the customer, the fixed fee charged, the job limit for that client, and the start and end dates for the client contract.

By being able to store this type of information, businesses are able to establish service agreements with their frequent or repeat customers.

A screenshot of a web form titled "Create Contract (Business Clients)". The form is set against a light blue background with a white border. At the top left is a "Back" button. The form fields include: "Business Client" (a dropdown menu with "-- select business client --"), "Fixed Fee (RM)" (a text input field), "Job Limit" (a text input field), "Start Date" (a date picker showing "mm/dd/yyyy"), and "End Date" (a date picker showing "mm/dd/yyyy"). At the bottom is a "Create Contract" button.

Figure 15: Business Client
Contract Page

4.4 Maintenance Scheduling

Taxis may have their maintenance recorded by staff personnel.

The maintenance records will include Taxi ID number, Service date, Next service date and a description of the maintenance performed.

By maintaining this information in a manner that is easily accessible to all persons performing services on the Taxis, it will be possible to ensure that all taxis are maintained in a safe condition for operation.

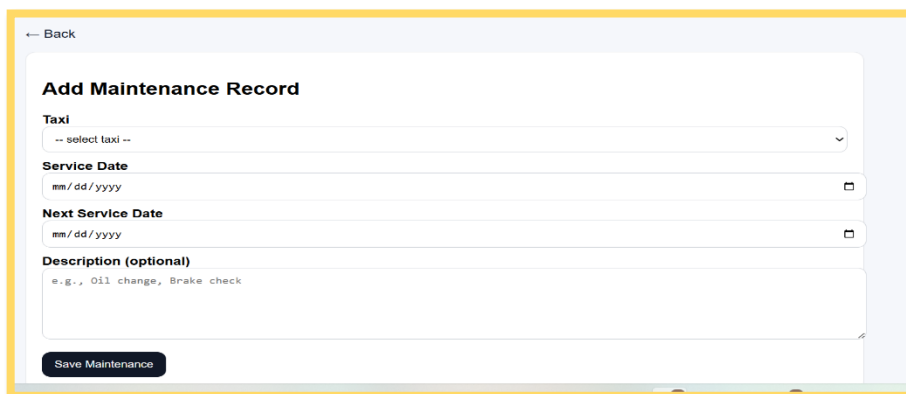

A screenshot of a web form titled "Add Maintenance Record". The form is set against a light blue background with a white border. At the top left is a "Back" button. The form fields include: "Taxi" (a dropdown menu with "-- select taxi --"), "Service Date" (a date picker showing "mm/dd/yyyy"), "Next Service Date" (a date picker showing "mm/dd/yyyy"), and "Description (optional)" (a text input field with a placeholder "e.g., Oil change, Brake check"). At the bottom is a "Save Maintenance" button.

Figure 16: Add Maintenance
Page

5. Driver Dashboard

After a driver logs in, they will be able to see all the jobs that have been assigned.

After logging in, the driver is redirected to their driver dashboard.

The driver dashboard allows the driver to access the assigned jobs of the driver.

A screenshot of a web dashboard titled "FastTaxi Driver Dashboard". The dashboard has a yellow background. At the top left is the "FAST TAXIS" logo. At the top right is a "Logout" button. Below the title is a white box containing the text "Welcome, driver7 (DRIVER)" and "Choose an action:". Below this box is a "My Assigned Jobs" button.

Figure 17: Driver
Dashboard

5.1 View Assigned Jobs

Drivers can view all assigned jobs by going to the My Assigned Jobs page.

The driver will be able to see on this page:

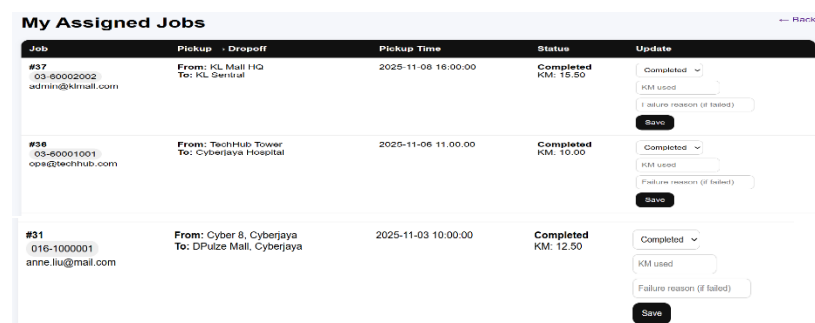

Job ID, Pickup Location, Dropoff Location, Pickup Time, Client Contact Information, Job Status.

The driver may then update the status of their assigned jobs.

Status values for an assigned job are: Completed and Failed

Additionally, drivers can add the distance they have traveled for that job (KM) and a failure reason if the job was a failure.

All entered data will be stored in the Job table in the database.

Job	Pickup - Dropoff	Pickup Time	Status	Update
#37 03-80002002 admin@klmail.com	From: KL Mall HQ To: KL Sentral	2025-11-08 18:00:00	Completed KM: 15.50	Completed KM used Failure reason (if failed) Save

Figure 18: Driver Assigned Jobs Page

6. Taxi Owners Dashboard

Owners of taxi businesses are able to log in to the system and view information regarding their taxis.

After a successful login, taxi owners will be directed to the Owner Dashboard. The Owner Dashboard gives the owner access to two main sections: My Taxis and Maintenance History.

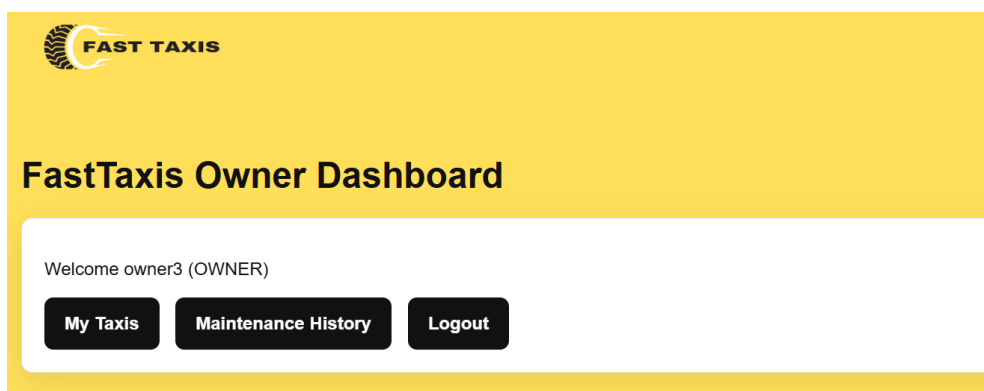

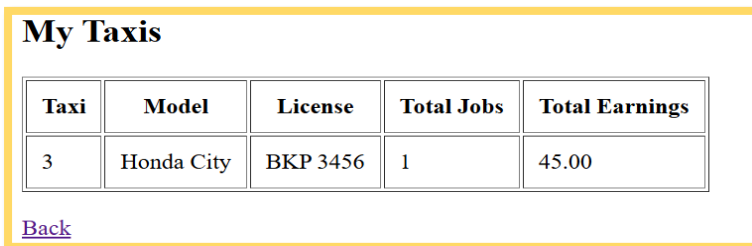

Figure 19: Taxi Owner Dashboard

6.1 My Taxis

On the My Taxis page, you can see all taxis that are under your ownership.

There is information shown as follows: Taxi ID, Taxi model, License plate, and Total number of jobs completed and total earnings made from these jobs.

The above enables Taxi owners to monitor how well their Taxis are doing in terms of employment.

Taxi	Model	License	Total Jobs	Total Earnings
3	Honda City	BKP 3456	1	45.00

[Back](#)

Figure 21: Taxi Maintenance History Page

7.0 Conclusion

The FastTaxis database application is an example of a relational database being used in conjunction with a web-based application for the day-to-day operation of a taxi company.

The FastTaxis System has many different user roles and functionality for managing drivers, taxis, clients, jobs, and maintenance records.

With the use of a MySQL database and PHP as a base language for the web interface, the FastTaxis System will allow its users to quickly and easily interact with all operational data while allowing only authorized personnel to have access to certain information.

The FastTaxis prototype was successful in demonstrating that a database application may be implemented in the real world to help in the management of transportation.
