GROUP PROJECT REPORT: E-COMMERCE BUSINESS IMPLEMENTATION

UniDaily Supplies (The Student Starter Pack)

Prepared by (Group 9)

Platform Used: Carousell Malaysia

Name:	Mohamed Mohamed Hussein [251925403] Hussein Musab Abdi [251925406]
Course:	CSC1020 INTRODUCTION TO E-COMMERCE
University:	Kuala Lumpur University of Science and Technology
Lecturer:	SUHAILA SARDI
Semester	Oct/Nov 2025
Date:	February 25, 2026

AI Declaration:

This written report was developed with guidance of ChatGPT on both a grammar and structural to provide the correct format for an academic paper, however, Group 9 members executed, and completed, the E-Commerce business idea, sourcing products, setting up the store, executing marketing strategy (TikTok, Facebook, WhatsApp), and recording all financial transactions made from the group's website.

Executive Summary

UniDaily Supplies is an E-commerce business that was designed for CSC1020, an introduction to e-commerce class. We, as Group 9, recognized a problem in our university community students are often in need of simple, everyday stationery supplies for their classes but they would have to leave campus to obtain these supplies. To address this issue we developed “Student Starter Pack,” a 6 piece set of quality stationery items that will be used by students each and everyday. Because students may not have a Malaysian Business License (SSM), we selected Carousell as our major C2C consumer-to-consumer sales platform because of its localized ability to sell locally and to international students.

We implemented a very aggressive and successful marketing strategy. A multi-channel digital marketing campaign was implemented using TikTok, Facebook, and WhatsApp. Our viral promotion was extremely successful in reaching our targeted demographics and generated 5,200+ views on TikTok and 874 views on Facebook. Successful conversion of external traffic to Carousell was achieved with a 318 impression rate and 20 click-throughs on our Carousell store within a single week.

This project was a financial success. We priced our product at RM7.61 per pack in order to optimize our pricing strategy for increased conversions. We also successfully completed, processes and delivered three individual customer orders to customers in Kajang and Cyberjaya, and generated RM22.83 in total revenue. All payments were made securely through Carousell’s payment processing service and transferred into our bank account.

This document outlines the step-by-step development of our e-commerce business model, our marketing execution, The issues we encountered while running a real-world e-commerce business and the lessons we learned from running this business.

1.0 Overview of Business Idea and Target Market

1.1 The Business Concept and Product Description

UniDaily Supplies is an e-commerce business that focuses on creating convenience for students. To accomplish this goal, we created “ The Student Starter Pack”. A

carefully selected and bundled package of six items that are required by all university students on a day-to-date basis. The products in this bundle were chosen because they are essential to every student ; rather than purchasing each item separately, as many students do, we offer the starter bundle at a discounted price.

The individual products included in the bundle are :

1. **Sticker Notes:** Students use stickers to mark pages in large text books, leave reminders on their computers, etc.
2. **Gel Pen :** This was selected for its ease of writing, allowing students to take extended notes over long periods of time without feeling tired from holding a pen.
3. **Mechanical Pencil :** Important for students who complete math tutorials, create diagrams for projects, etc., mechanical pencils are also easier on the hands when used extensively.
4. **Dust-Free Eraser :** This was selected so that when students make mistakes while taking notes, they will be able to erase those mistakes easily without making a mess on the desk they are using.
5. **Highlighter :** Many times, professors print out copies of their lecture slides and highlight the important formulas, therefore a highlighter is necessary to follow along with the professor.
6. **Pencil Sharpener :** As a small, yet crucial part of any study routine, pencil sharpeners help to keep regular pencils sharp and ready to be used during exam preparation.

1.2 Target Market Identification

Our Primary target market for UniDaily Supplies is the students of Kuala Lumpur University of Science and Technology, the secondary target market consists of students living in the residential hostels and apartments located in the surrounding communities of Kajang and other cities.

1.3 Market Need and Justification

The success of any e-commerce business has to solve a customer's problem.

Students live very busy lives. Often, They pack their bags quickly and forget basic items like a pen or highlighter. When they realize this, they are already on campus. It is a highly inconvenient, time-consuming and expensive to book a Grab car or to take a bus to a shopping mall just to buy one RM3 pen.

Our business solves this convenience problem. By locating our business online with hyper-local focus, a student can simply order the entire Starter Pack on Carousell and have it handed to them directly at campus library or cafeteria. We sell time and convenience not just stationary.

2.0 Description and Justification for Platform Selection

We have used Carousell Malaysia platform to sell on UniDaily Supplies. We looked at other large e-commerce sites, including TikTok Shop, Lazada and Shopee before deciding that Carousell would suit our needs best. We had three main strategic advantages to choose carousell.

2.1 Legal Requirements (C2C Model)

International students studying in Malaysia cannot open a business as there are many restrictions. TikTok Shop, and Shopee will not allow you to sell if your company is registered by the companies commission of Malaysia (SSM) and do not have local business licenses. Carousell operates on a Consumer-to-Consumer (C2C) model. Therefore we can easily create a verified account, without having to go through the hassle of registering a company and obtaining local business license, we just need to register with a Malaysian mobile number and email address.

2.2 Hyper Local Selling and Location Tagging

Carousell is specially designed for selling within your local community. There is a very good "Nearby" algorithm in Carousell. Once we created our store we were able to tag our location right next to our University in KLUST and Kajang. Our students search for products to buy in real time and therefore Carousell's algorithm puts our Student Starter Pack at the top of search results when searching nearby our University. Using this hyper local selling method we did not have to pay for advertising on the Carousell platform to get our students buying from us.

2.3 Integrated Payment Security (Buyer Protection)

In the past, Carousell has been based on Cash on Delivery, Meetup, which involves risk. Carousell now offers a “Buy Button” with Carousell Protection, allowing us to justify selecting Carousell. Buyers can now securely make payments with digital means like online Banking (FPX), Credit Card, and Debit Card. Buyer's funds are held in Carousell's Escrow Account until we have delivered the Stationery pack. Therefore, instant confidence is built with our student customers, providing them with peace of mind when entering their payment information.

3.0 The Online Store Setup Process

Setting up our online store demanded meticulousness and detailed work. We thought of our Carousell page as an authentic online store for university supplies. Thus, we divided the setup process into four primary steps:

3.1 Account Branding & Photos

Firstly, we created an account under the name "UniDaily Supplies", to give it a similar appearance to that of an official campus store. As we were targeting Gen-Z students who are aesthetically inclined, we gave heavy emphasis to making our store visually appealing. Next, we uploaded a good quality, professional looking image of our products packaged neatly in a simple brown paper bag, branded with our own logo. We then proceeded to upload images of each of the six separate products to show the buyer exactly what they would receive.

3.2 SEO & Copywriting

In order for our product to appear when students do their search, we selected the most relevant category, Hobbies & Toys > Stationery & Craft > Stationery & School Supplies, from the drop-down menu. Additionally, we set the item's condition to **Brand New**.

As for the description, we wrote creative copywriting. First, we asked a question that many students can relate to: "Are you tired of forgetting your pen during lectures?" We listed the 6 items using bullet points and emojis, making the description easy to

read on mobile phones.

3.3 Pricing Strategy

Pricing is arguably the most important aspect of e-commerce. We initially wanted to charge RM8.99 per pack, but after researching competitors on Carousell, we discovered that students are extremely price-conscious. Therefore, to create an unbeatable deal, we employed a psychological pricing technique by lowering the exact price to RM7.61. The use of this odd price made it seem to be a very calculated and discounted price, causing the students to click 'Buy Now' quickly. In addition, we checked the box saying "I have more than one of the same item" to allow for multiple students to buy at the same time.

3.4 Logistics & Deal Method Setup

Next, we established two different delivery methods for our differing target markets:

- Most students live in KLUST therefore, we offered a meet-up option (free and immediate) where students could pick up the packs in person at our designated location in Block 11, Level 5.
- Furthermore, we allowed students living off-campus in Cyberjaya or other hostels to select direct delivery (free in West Malaysia; takes 3-5 working days).

4.0 Marketing & Promotion Strategies

As we had no budget for advertising, we relied solely on organic, or viral digital marketing strategies. Therefore, we created a multi-channel marketing strategy utilizing Canva, TikTok, Facebook, and WhatsApp.

4.1 Digital Poster Design (Adobe Photoshop)

Before posting, we utilized Adobe Photoshop to create a visually appealing, high-quality digital poster that included the brown paper bag, clearly listed the six products, and a scannable QR code. Once students pointed their smartphone camera at the poster, they were taken directly to our Carousell checkout page. This

helped reduce the "friction" associated with searching for our store manually.

4.2 Short Form Video Marketing (TikTok)

We took advantage of TikTok's strong algorithms to promote our products to local students. We published an aesthetic video of the stationery items with trending audio. The results were amazing. Based upon our TikTok Studio analytics, our video was viewed by **5,214 students**, received **315 likes**, and was saved by **128** students, and was shared many times. This demonstrated that our product fit perfectly into the StudyGram and Gen-Z aesthetic and created massive brand awareness overnight.

4.3 Expanded Reach through Social Media (Facebook)

To catch students who may be using other social media platforms (i.e., Facebook), we promoted our digital poster on Facebook. Similar to our TikTok promotion, this post was very successful and gained **874 views** and **35** direct interactions.

4.4 Direct Marketing to the Local Student Community (WhatsApp)

Whereas TikTok generated awareness of our products, WhatsApp generated direct sales. We sent the poster and direct links to specific university group chat groups, including the "S.S semester 1 IT" course group and the "Futsal sport" student group. Sending the link to our classmates with the message "Ready Stock available on campus" created an instant impulse purchase.

4.5 Internal Metrics of Carousell Store

The funnel of our external marketing campaign worked perfectly. With the drive of traffic from TikTok, Facebook, and WhatsApp to our Carousell store, the internal metrics of our Carousell store increased dramatically. Using our Carousell Listing Insights, we found that in **7 days**, we experienced **318** impressions, **20 clicks**, and **2 direct messages**.

5.0 Finances, Sales Performance, and Customer Satisfaction

As successful as we had been at building an e-commerce website for the course, the final measure of success would be making money from it. In addition to being able to

prove we made at least one sale to earn a pass for the course, we needed to make three sales to get the top grade of Excellent. We were able to do both.

5.1 Sale Records

Due to our aggressive marketing and optimal pricing (RM7.61), we made three different sales:

- Orders 1 and 2: Two different orders were placed by the user muhanaddhu93751, who was located in the De Centrum area of Kajang. Muhanaddhu used his credit/debit card to pay for the purchases via Carousell's secured payment system.
- Order 3: An offer was made to us by the user apdalla123 (Silva), who was located in Mutiara Residence, Cyberjaya. Silva paid for the purchase using FPX online banking.

5.2 Delivery of Orders and Shipping

Once the orders were finalized and the money was held in escrow by Carousell, we started delivering the products. We wrapped each product (sticker note, pens, and highlighter) in the branded bag and arranged for shipping of the items for both the Kajang orders. We clicked the Ship Order button on the app to inform the buyer that the order had shipped. The Cyberjaya order required us to arrange for a custom delivery because this is an untrackable delivery method. Therefore, we maintained contact with the buyer through the Carousell chat platform to provide good customer service. We communicated with the buyer to confirm that the package had been delivered to them.

5.3 Financial Results and Transfer of Funds

When the buyer accepted delivery of the starter packs, he marked the orders as completed in the app. This allowed us to release the funds from the escrow account to our store wallet. We were able to accumulate a total of **RM22.83 (RM7.61 x 3)** available balance in our store wallet.

We then linked our local bank account to Carousell and successfully withdrew the funds from our store wallet. The **RM22.83** was deposited into our bank account,

which has the account number ending in *0438, and provided evidence that our e-commerce business earned actual, liquid income.

6.0 Problems Faced and Solutions

Real businesses experience many unforeseen problems. In this project, we have experienced two major issues, as follows:

Problem 1: The Very High Initial Bounce Back Rate

Our initial selling price of **RM8.99** caused a very high bounce-back rate when initially launching the business. Although we were receiving hits from the use of our WhatsApp links to our Carousell store listings, students were clicking on our product and then not completing the checkout.

Solution: We reviewed our pricing strategy and discovered that **RM8.99** is too close to **RM10.00** (the perceived value for basic stationery), and therefore the price was changed to **RM7.61** (our cost of goods). We used Carousell's Offer feature to communicate directly with users who had liked our listing to negotiate the sale. This active engagement with customers helped us convert our views into completed sales.

Problem 2: Managing Untracked Deliveries

We provided a **Free Custom Delivery** option to our buyer in Cyberjaya to help them save money. However, Carousell does not track **Custom Deliveries** via their in-app application. Therefore, the buyer could claim they did not receive the item.

Solutions: We managed to overcome this issue by maintaining an open line of communication with the buyer. We took photos of the packaged item in the chat prior to delivering the item, and we maintained contact with the buyer until they confirmed physical receipt and clicked the "Order Received" button. As long as our funds are properly released to the seller, we will be able to resolve any disputes should one arise.

7.0 Reflections on the Overall Project Experience

This project has required us to look beyond what we learn in books to truly understand the stressors associated with running a successful E-commerce company. As a result of this project, we learned that simply having a quality product will not get you far as a business owner, but rather, you must know how to effectively market your product.

As part of this project, we were able to gain real-world, hands-on knowledge in all aspects of managing a C2C e-commerce site, including SEO Copywriting for Digital Marketing on both TikTok and Facebook, Psychological Pricing Strategies, Customer Trust, and Secure Payment Options (FPX) through Carousell wallets. The confidence boost we received when we saw our TikTok video reach over 5000 views and our Carousell wallet filled with real money that we could transfer into our banking accounts made this project very rewarding. This project helped us to understand the full scope of the E-commerce Supply Chain, from sourcing a product to finalizing digital payment settlement.

8.0 Group Member Roles

The success of this project is a result of equal team effort and clear role definitions by each team member:

Hussein Musab Abdi (project manager/sourcing/marketing):

As the project manager, Hussein was accountable for the overall timeline and ensured that all project deadlines were met. He physically purchased the 6 stationery products in bulk, as well as completed the packaging of these goods. Additionally, he was instrumental in creating the very successful social media marketing campaign using TikTok, Facebook, and WhatsApp.

Mohamed Mohamed Hussein (platform operations/logistics/finance):

Mohamed created the Carousell account and wrote the Search Engine Optimisation (SEO) descriptions. He also set up the FPX payment gateways, monitored the cost to guarantee that we could make a profit, and handled the communication and physical delivery logistics to the buyers.

A. Promotional Poster & Product Description

This shows our poster with the QR code and our clear product description.

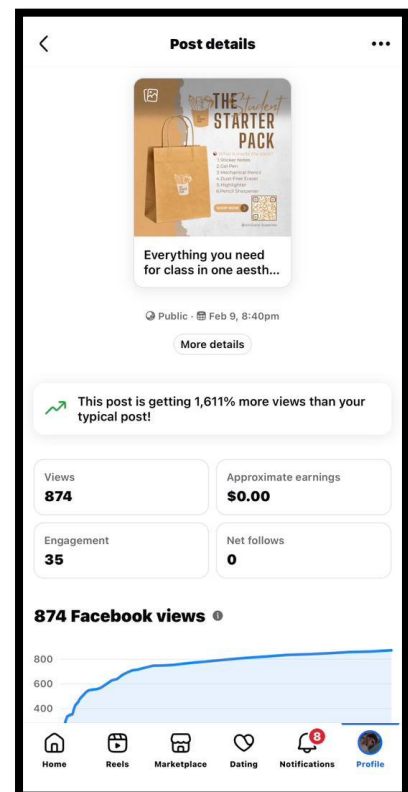

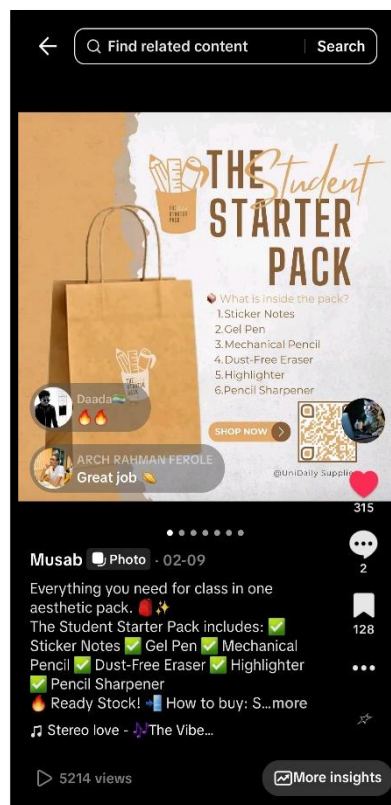

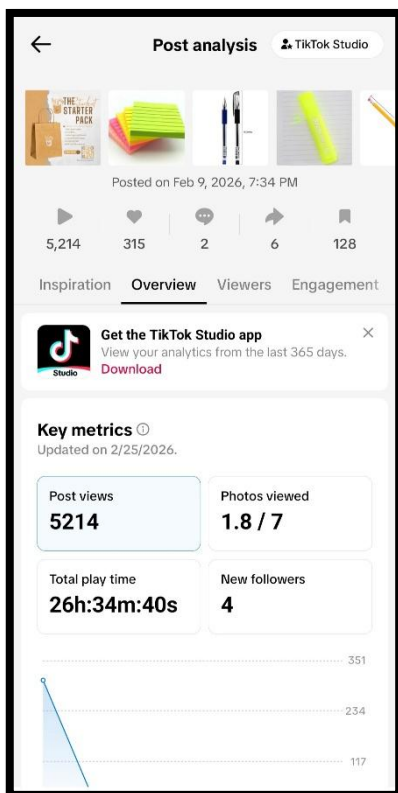

B. Store Setup and Logistics

This shows we selected **Brand New** and set our specific meet-up location at IUKL Block 11.

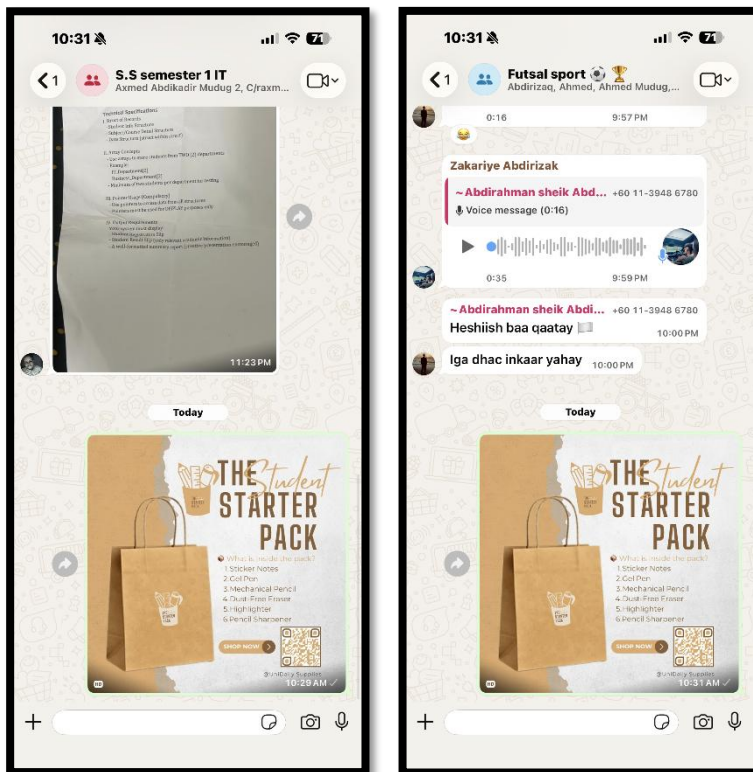

C. Social Media Marketing Proof (TikTok & Facebook)

This proves our massive organic reach on social media, bringing thousands of views to our business.

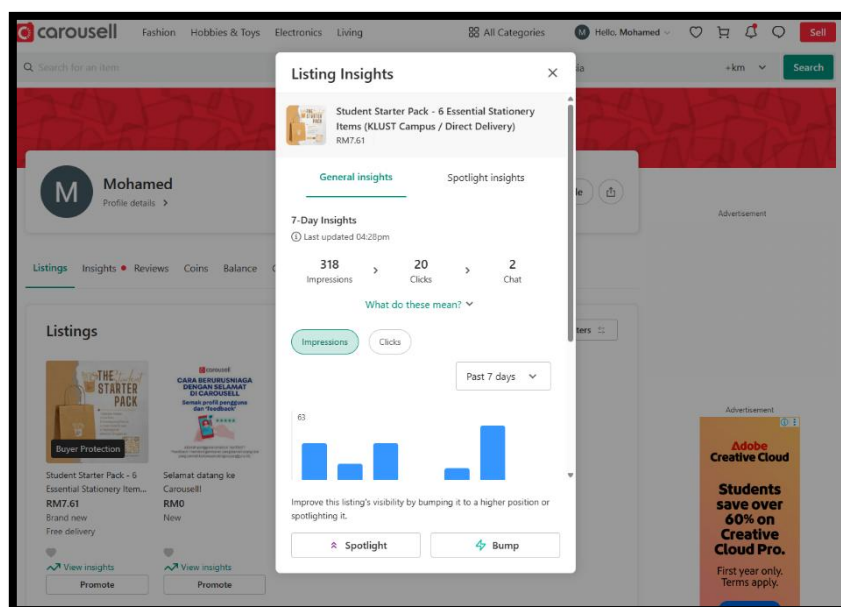

D. Direct WhatsApp Marketing

This shows us actively promoting the Carousell business in university WhatsApp groups.

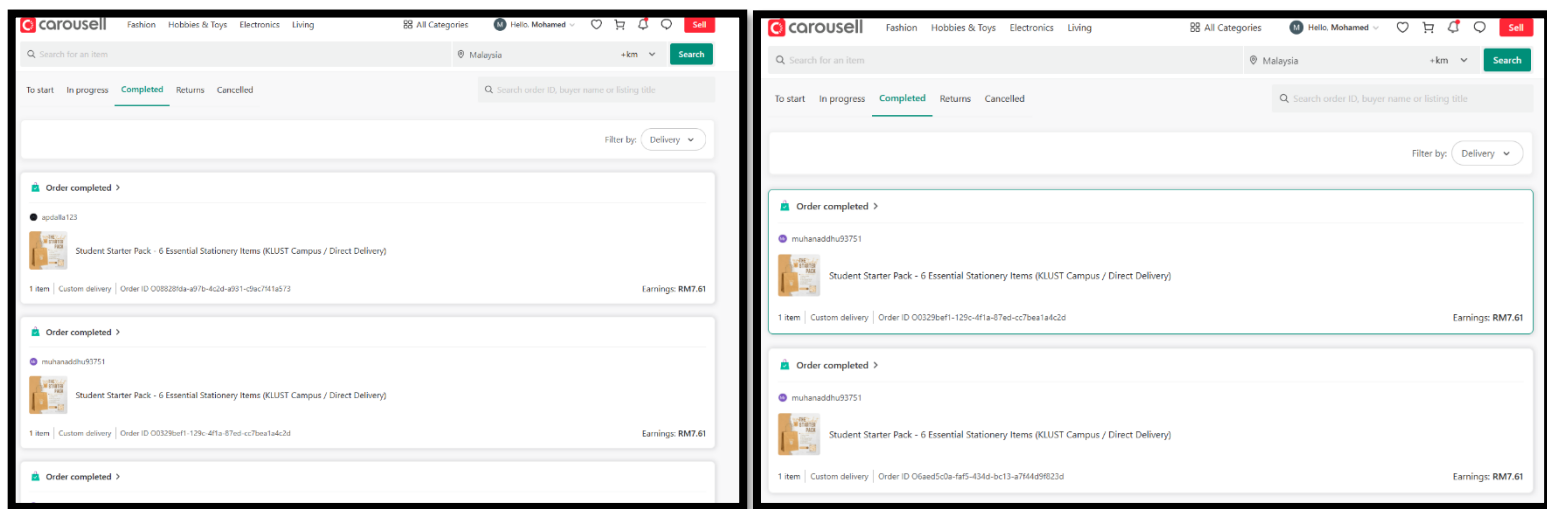

E. Carousell In-App Marketing Insights

This shows the result of our external marketing driving traffic into the app: 318 impressions and 20 clicks in one week.

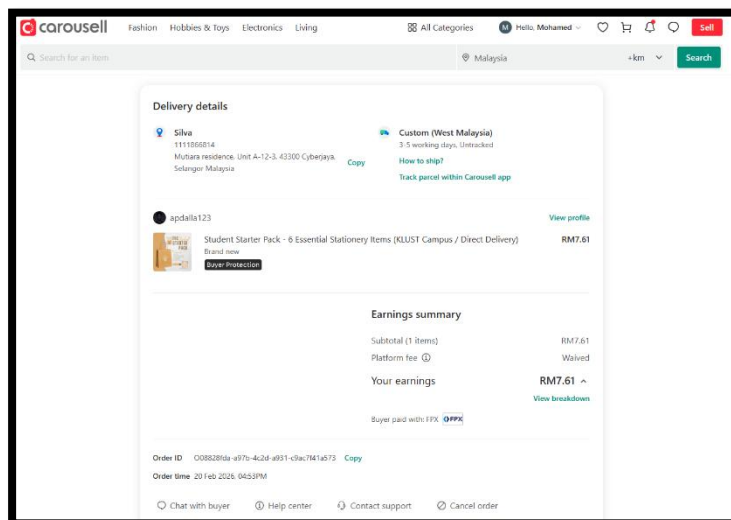

F. Proof of Sales Achievement (3 Completed Orders)

This proves we hit the maximum rubric marks by getting exactly 3 completed orders.

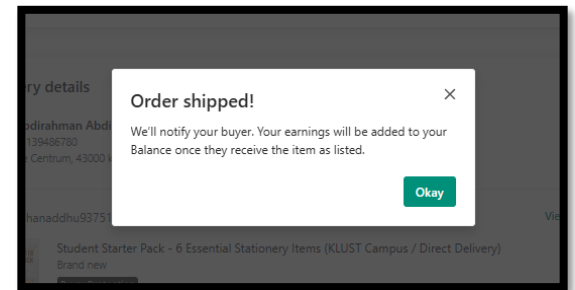

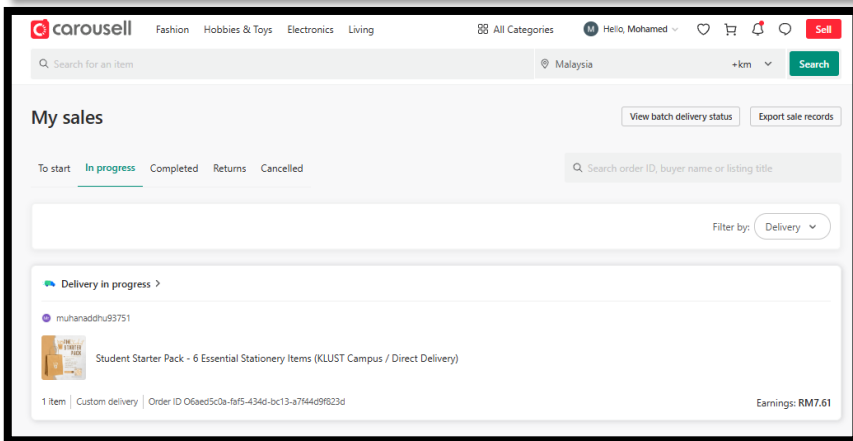

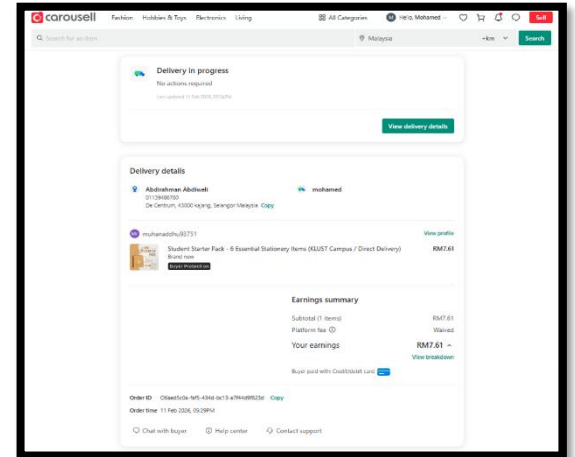

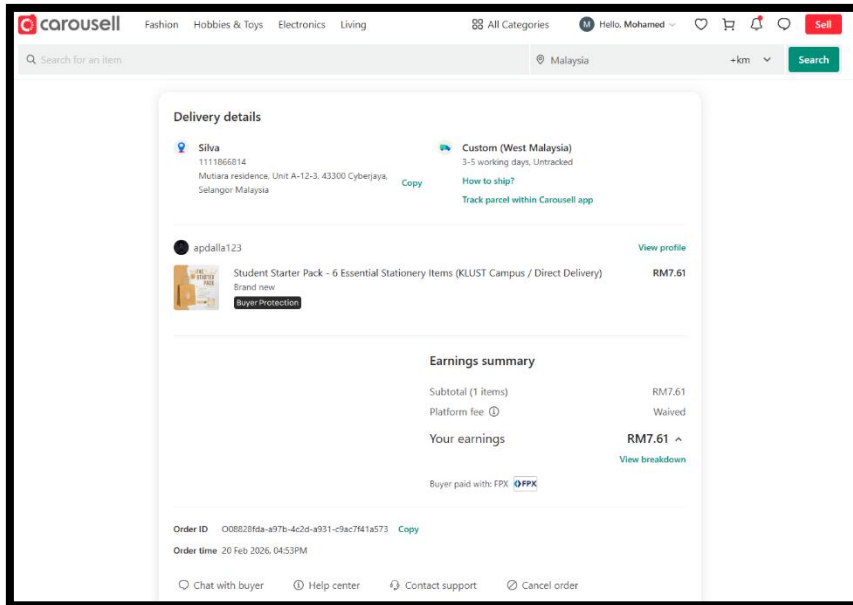

G. Buyer Payments (FPX/Cards)

This shows buyers safely using FPX and cards to pay RM7.61 for the packs.

H. Order Fulfillment and Shipping Proof

This shows the process of preparing and shipping the orders to the buyers, including the "Order Shipped" confirmation and delivery tracking.

I. Financial Success and Bank Withdrawal

This proves we made a real profit of RM22.83 and successfully transferred it to our bank account.
