1. Introduction

This report presents the proposed corporate multimedia solution for Fadwa Collection, continuing the organisational analysis completed in Individual Assignment 1. Fadwa Collection is a small online business selling women's clothing, mobile accessories, bags and jewellery accessories. Its customers are mainly young women interested in affordable fashion and active on social media. The business aims to attract new customers, build a recognisable brand image, increase sales and encourage repeat purchases.

The first assignment found that Fadwa Collection currently depends mainly on Instagram for product promotion and WhatsApp for enquiries and orders. It has no dedicated website or digital catalogue and has limited presence on other social platforms. The analysis also identified inconsistent photo and video quality, lack of consistent branding, dependence on a single social platform, no professional catalogue, limited short-form video and disorganised order management through chat.

Assignment 2 therefore moves from problem identification to solution design. The objective is to recommend a realistic multimedia system that improves Fadwa Collection's brand identity, product presentation, online reach and customer experience while remaining affordable and manageable for a small business. The proposal combines visual branding, a responsive website/catalogue, social-media expansion, product photography, short-form promotional video and consistent corporate communication materials.

The recommendations are based on the prototypes already produced for Fadwa Collection, including the logo and brand board, business card, corporate website interface, email signature and social-media banner. These prototypes demonstrate how one visual identity can be applied consistently across multiple multimedia channels.

2. Multimedia Solution Overview

The proposed solution is a unified digital brand ecosystem rather than a collection of unrelated designs. Every customer touchpoint should use the same visual language, including the logo, colour palette, typography, photography treatment and tone of communication. This consistency is intended to make Fadwa Collection easier to recognise and more professional across Instagram, Facebook, TikTok, the website and direct customer communication.

The visual identity developed for the project uses a fashion-inspired hanger symbol integrated with the Fadwa Collection name and the descriptor "Clothes · Accessories". The identity is supported by a premium but approachable palette of soft pink, burgundy, gold, off-white and a dark neutral. Burgundy functions as the dominant brand colour, gold provides a premium accent, soft pink adds warmth, off-white supports clean layouts and the dark neutral improves text contrast.

Colour	Hex Code	Main Use
Soft Pink	#E8B4B8	Supporting accent and soft backgrounds
Burgundy	#7A2E3B	Primary brand colour and strong headings
Gold	#D9A441	Premium accent, lines and highlights
Off White	#FAF6F2	Clean background and visual breathing space
Dark Neutral	#2B2B2B	Body text and high-contrast elements

The solution contains six connected components: corporate visual identity; a responsive website and digital catalogue; coordinated Instagram, Facebook and TikTok content; consistent product photography; short promotional videos; and branded communication materials such as a business card, email signature and social-media banners. Together, these components directly address the multimedia requirements identified in Assignment 1.

3. Recommended Multimedia Tools and Hardware

3.1 Graphic Design and Branding

Adobe Photoshop is recommended as a primary professional tool for image correction and high-quality marketing graphics. It can be used to correct exposure, crop product photographs, improve backgrounds, resize images for different platforms, prepare website graphics and produce campaign materials. This is especially relevant because Assignment 1 identified inconsistent smartphone photography and lighting as a major weakness.

Affinity is also suitable for preparing branded layouts and visual communication assets. The project evidence shows Affinity being used for the email-signature and website-related design work. It provides a practical environment for combining images, typography, shapes and brand elements while maintaining editable layers.

Canva is recommended for routine production after the main visual identity has been established. Reusable templates can be created using the approved logo, colours and typography. The owner can then update product photographs, prices and captions without rebuilding every design. This reduces production time and makes brand consistency easier to maintain.

3.2 Website and Digital Catalogue

A simple responsive website should become the central owned digital platform for Fadwa Collection. The proposed prototype includes Home, Shop, New Arrivals, Accessories, About and Contact navigation. The homepage uses the headline “Timeless Style, Modern You” and gives direct access to Clothes, Accessories and New Arrivals.

The website should organise each product using a consistent structure: product image, product name, short description, price, availability and an order/contact option. This is more efficient than requiring customers to scroll through old Instagram posts or repeatedly ask for available products through WhatsApp. A mobile-responsive design is essential because the target audience is already highly active on social platforms and is likely to browse from smartphones.

For the first implementation, a template-based content management or e-commerce platform is recommended instead of fully custom development. This approach is easier for a small business to maintain and can still provide a professional catalogue, category navigation and contact or checkout functions.

3.3 Social Media Content

Instagram should remain an important channel because it is already part of Fadwa Collection’s existing operation. However, the content should become more structured through branded product posts, Stories, Reels, new-arrival announcements, styling ideas and campaign templates.

A Facebook business page is recommended as an additional channel for product discovery and customer communication. Selected campaign content can be adapted from Instagram while retaining the same brand

identity. A Facebook cover/banner prototype has already been developed in this project, showing how the brand can remain visually consistent when expanded to another platform.

TikTok should focus primarily on short-form video. Suitable content includes new-arrival showcases, close-up accessory videos, simple styling ideas, packaging clips and short promotional sequences. This responds directly to the limited video use identified in Assignment 1 and creates another route for reaching younger potential customers.

3.4 Video Production

Short promotional videos are recommended to complement static product images. A typical 15–30 second social video can follow a simple sequence: brand introduction, product close-ups, clothing or accessory showcase, new-arrival message, call to action and logo ending. The same footage can be adapted for Instagram Reels, TikTok and Facebook.

CapCut is recommended for frequent short-form editing because it is fast and accessible for social content. Adobe Premiere Pro is more suitable for higher-value campaign videos that require detailed timeline control, audio adjustment, transitions and advanced export settings. The recommended approach is therefore to use CapCut for routine production and Premiere Pro when a campaign requires more advanced editing.

3.5 Hardware Recommendations

The multimedia solution does not require expensive studio equipment at the beginning. Existing devices should be retained where they remain functional. The priority should be better lighting, stability, composition and consistent editing before purchasing a professional camera.

Hardware	Purpose	Recommendation
Existing smartphone	Photo and video capture	Continue using initially; modern phones are sufficient for regular social content when lighting and stability are controlled.
Existing laptop/computer	Design, editing and website management	Continue using if it runs the required software reliably.
Tripod	Stable photos and video	Purchase; improves framing and reduces camera movement.
LED or ring light	Consistent illumination	Purchase; addresses inconsistent lighting identified in Assignment 1.
Neutral backdrop	Clean product presentation	Purchase or create a simple reusable setup.
Cloud/external storage	Backup of source files and final assets	Recommended to reduce the risk of losing business content.

4. Multimedia Production Workflow

A defined workflow is necessary because the existing content problem is not only a lack of tools; it is also a lack of consistent production. The following workflow creates a repeatable process from planning to performance review.

1. Planning – Identify the product or campaign objective, target platform, required format and intended customer action. Prepare a weekly content schedule.

2. Content Preparation – Select products, clean and arrange them, prepare the background, lighting and any styling props, and confirm current prices and stock information.

3. Photography and Video Capture – Capture multiple product angles and short video clips using consistent lighting, framing and camera settings. Keep the visual treatment similar across a campaign.

4. Editing – Select the strongest photographs, correct exposure and colour, crop consistently and resize for the required platform. Edit video clips and audio for short-form use.

5. Branding – Apply the approved logo, colours, typography and reusable layout templates. Avoid changing the visual identity between platforms.

6. Review and Quality Control – Check spelling, product information, price, availability, image quality, dimensions, links and brand consistency before publishing.

7. Publishing – Upload approved content to the website and selected social channels. Keep product information consistent across all customer touchpoints.

8. Customer Interaction – Respond to enquiries clearly and professionally. Direct customers to the website/catalogue when this reduces repeated questions.

9. Performance Review – Review reach, engagement, website visits, enquiries and orders. Record which content formats and products perform strongly.

10. Improvement – Use the performance review to improve future photography, video, timing, platform choice and campaign design.

PLAN → PREPARE → CAPTURE → EDIT → BRAND → REVIEW → PUBLISH → ENGAGE → MEASURE → IMPROVE

5. Budget Plan

No supplier quotations were supplied with Assignment 1. Therefore, the following figures are planning estimates in Malaysian Ringgit (RM), not confirmed quotations. The purpose of the budget is to demonstrate a realistic first-year implementation for a small online business while reusing existing equipment where possible.

Item	Estimated Cost (RM)	Justification
Existing smartphone	0	Existing device retained for photography and video.
Existing laptop/computer	0	Existing device retained for design and administration.
Tripod	80	Stable photography and video capture.
LED/ring light	120	More consistent product lighting.
Backdrop/basic photo setup	100	Cleaner and repeatable product presentation.
Domain name	70/year	Professional web identity; estimated allowance.
Website hosting/platform	360/year	Catalogue/website operation; estimated allowance.
Design/video software allowance	600/year	Estimated allowance for paid creative tools where required.

Cloud/storage allowance	120/year	Backup and file access.
Initial social-media advertising	300	Small test budget for selected campaigns.
Contingency	150	Unexpected small implementation costs.
TOTAL ESTIMATED FIRST-YEAR BUDGET	**1,900**	**Planning estimate; actual cost depends on selected vendors and subscriptions.**

The budget intentionally avoids purchasing a professional camera or high-end computer immediately. For Fadwa Collection, improving lighting, stability, brand consistency and workflow is a more practical first investment. If sales and content requirements grow later, camera and computer upgrades can be considered based on demonstrated need.

6. Comparison and Justification

The recommended solution was selected by comparing alternatives according to cost, ease of use, quality, maintenance and suitability for a small online business. The goal is not to select the most expensive tool, but to choose a combination that Fadwa Collection can realistically maintain.

Requirement	Option A	Option B	Recommendation / Justification
Graphic design	Photoshop / Affinity	Canva	Use professional tools for master assets and image editing; use Canva for fast reusable daily templates.
Video editing	Premiere Pro	CapCut	Use CapCut for routine short videos and Premiere Pro for advanced campaign work.
Website	Custom-coded website	Template/CMS solution	Start with a template/CMS because it is easier and less costly to maintain.
Photography	Professional camera	Existing smartphone + lighting	Improve lighting and stability first; upgrade camera only when business needs justify it.
Digital presence	Instagram only	Website + Instagram + Facebook + TikTok	Multi-platform presence reduces dependence on one platform and broadens discovery.
Product catalogue	Social posts/chat	Structured website catalogue	Website catalogue improves browsing and reduces repeated product enquiries.
Storage	Device only	Cloud + local copy	Combined backup is safer for business assets and project files.

A hybrid design workflow is the strongest fit. Canva is fast for repeated social posts, but Photoshop and Affinity offer more control for professional image preparation and master branding assets. Similarly, CapCut is convenient for frequent short-form content while Premiere Pro is appropriate when a campaign requires more advanced editing.

A template-based website is recommended over a fully custom-coded system at the current business scale. Custom development can provide greater flexibility, but it introduces more technical maintenance and potentially higher cost. The proposed catalogue needs are straightforward enough to be achieved through a managed platform initially.

The same reasoning applies to photography hardware. Assignment 1 identified inconsistent lighting and presentation rather than simply the absence of an expensive camera. A smartphone combined with a tripod, controlled lighting, a clean background and consistent editing can substantially improve output without unnecessary capital expenditure.

7. Expected Impact

Stronger Brand Recognition: Consistent use of the hanger logo, burgundy/pink/gold palette and visual style should make Fadwa Collection easier to recognise across customer touchpoints.

Improved Professional Image: Consistent photography, a structured website, business card, email signature, and branded social content create a more organised and credible presentation.

Easier Product Discovery: A website/catalogue allows customers to browse categories and current products instead of searching through old posts or repeatedly asking through chat.

Broader Digital Presence: Adding a website, Facebook and TikTok reduces complete dependence on Instagram and creates more opportunities for customer discovery.

More Content Variety: The business can combine product photographs, Reels/TikToks, banners, web graphics, and campaign materials rather than relying mainly on static posts.

More Efficient Production: Templates and a defined workflow reduce repeated design work and make quality control easier.

Better Measurement: Website and social analytics can be used to compare reach, engagement, visits, enquiries and conversions so future content decisions are based on evidence.

The expected result is therefore not simply “more social media”. It is a connected multimedia system that supports brand recognition, customer discovery, communication, repeatable production and future growth.

8. VBE Considerations

The solution integrates the four VBE considerations required by the assignment: Responsibility, Integrity, Inclusiveness and Sustainability. These principles continue the ethical approach established in Assignment 1 and influence both content production and technology choices.

Responsibility – Product photographs and descriptions should represent the real product accurately. Editing should improve presentation without misleading customers about colour, size, condition or features. Prices and availability should be kept current.

Integrity – Fadwa Collection should use appropriately licensed photographs, templates, fonts, music and other multimedia assets. Reviews should not be fabricated and promotional content should avoid unsupported claims.

Inclusiveness – Content should be easy to understand and access. Practical measures include readable typography, adequate contrast, captions for important videos, clear navigation and bilingual communication where appropriate for the customer base.

Sustainability – Digital catalogues and reusable online promotional materials can reduce unnecessary printing. Existing devices should remain in use while functional, and reusable templates reduce repeated production work and resource use.

9. Conclusion

This report proposes a comprehensive corporate multimedia solution for Fadwa Collection based directly on the weaknesses identified in Assignment 1. The proposed system combines a consistent visual identity, responsive website/catalogue, improved product photography, short-form promotional video, multi-platform social-media communication and branded corporate materials.

The recommended tools include Photoshop and Affinity for professional visual production, Canva for reusable social-media templates, CapCut for frequent short-form video and Premiere Pro for more advanced campaign editing. Existing hardware should be retained where possible, supported by relatively inexpensive improvements such as lighting, a tripod and a clean photography background.

A structured workflow has been proposed to ensure that multimedia content is planned, produced, checked, published and measured consistently. The first-year budget is intentionally modest and is presented as an estimate because no supplier quotations were provided. This keeps the recommendation realistic for a small online business and avoids unnecessary spending.

Most importantly, the branding, website interface, social-media banner, business card and email-signature prototypes already produced demonstrate that the proposed solution can be implemented consistently across different multimedia channels. Through this approach, Fadwa Collection can progress from a business relying mainly on Instagram and WhatsApp into a more organised, recognisable and sustainable digital brand.

11. Appendices

Appendix A – Brand Identity Board

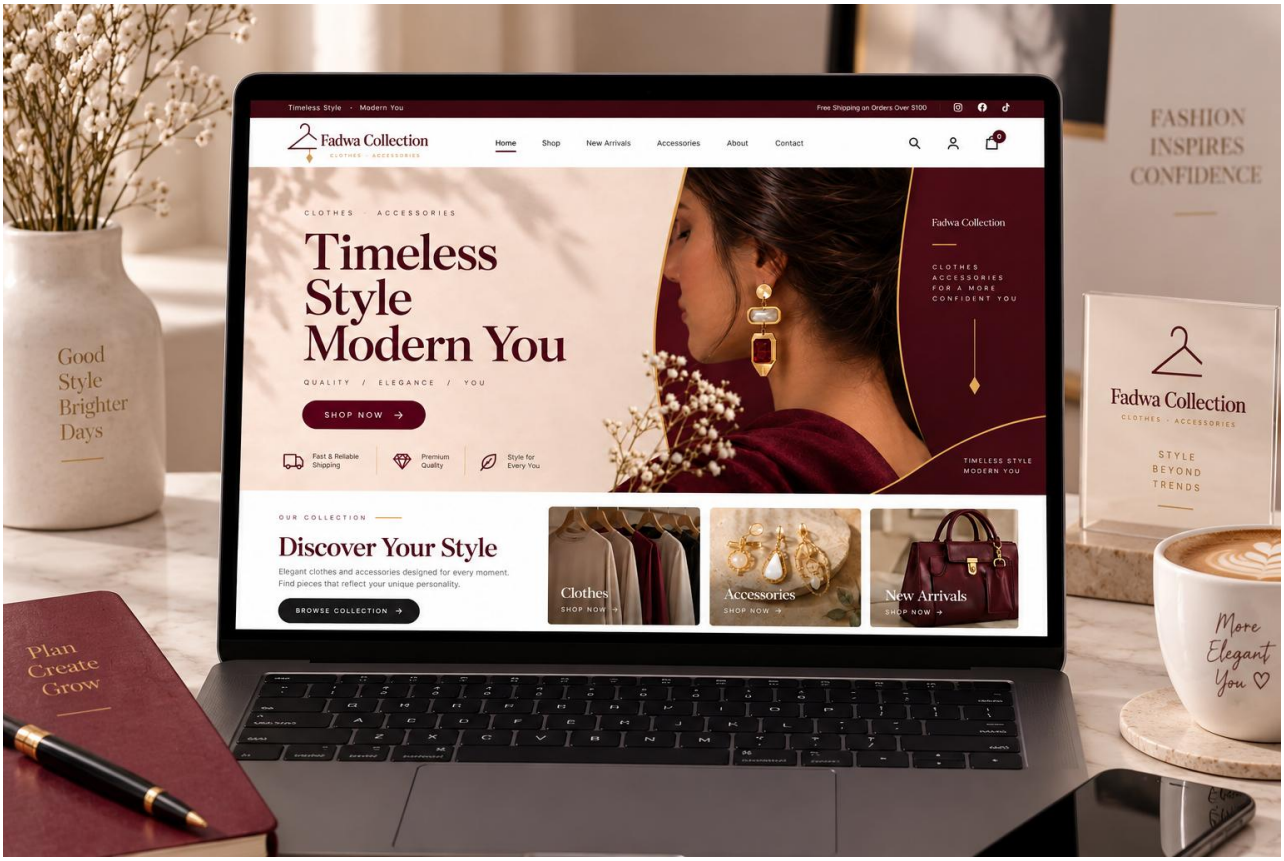

Fadwa Collection brand identity, logo applications and colour palette.

Appendix B – Business Card Mock-up

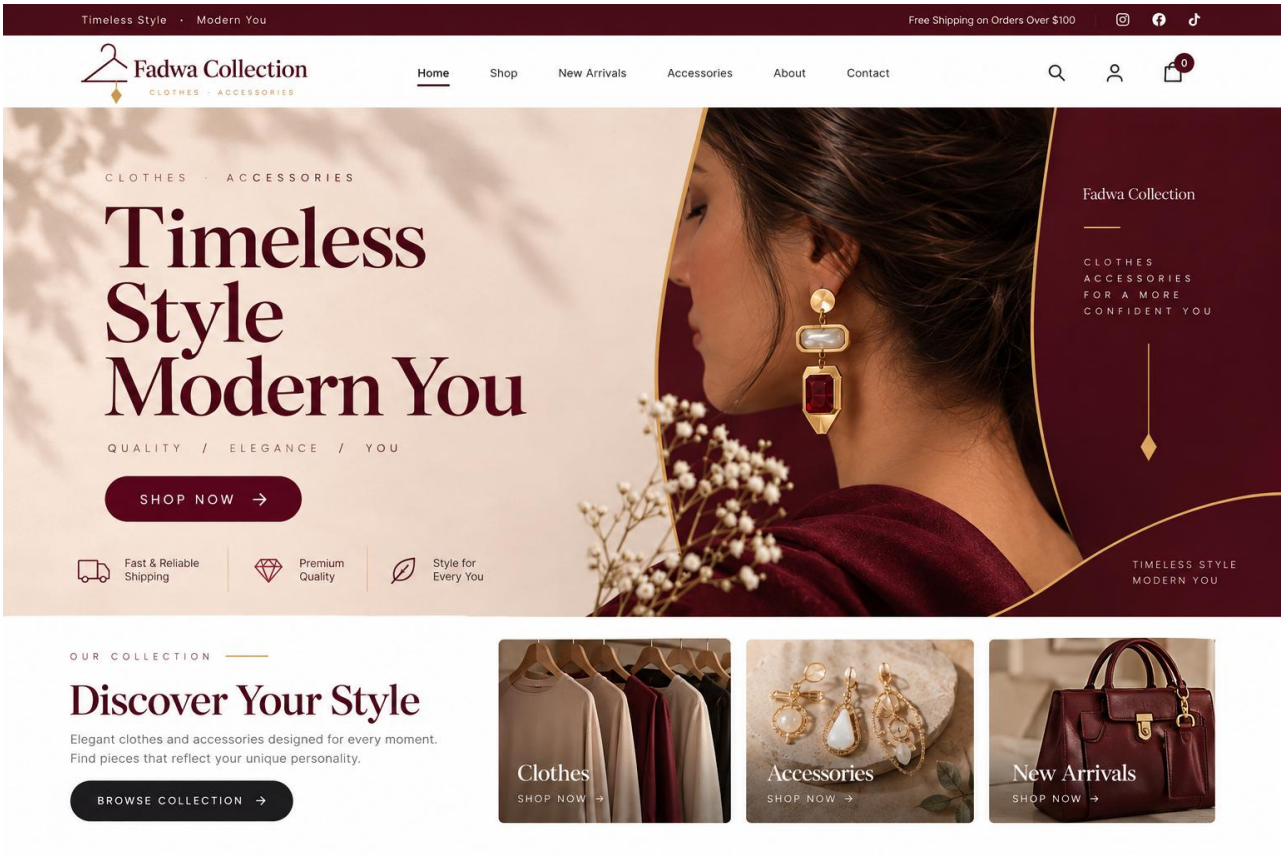

Business card application demonstrating the brand identity in corporate communication.

Appendix C – Corporate Website Mock-up

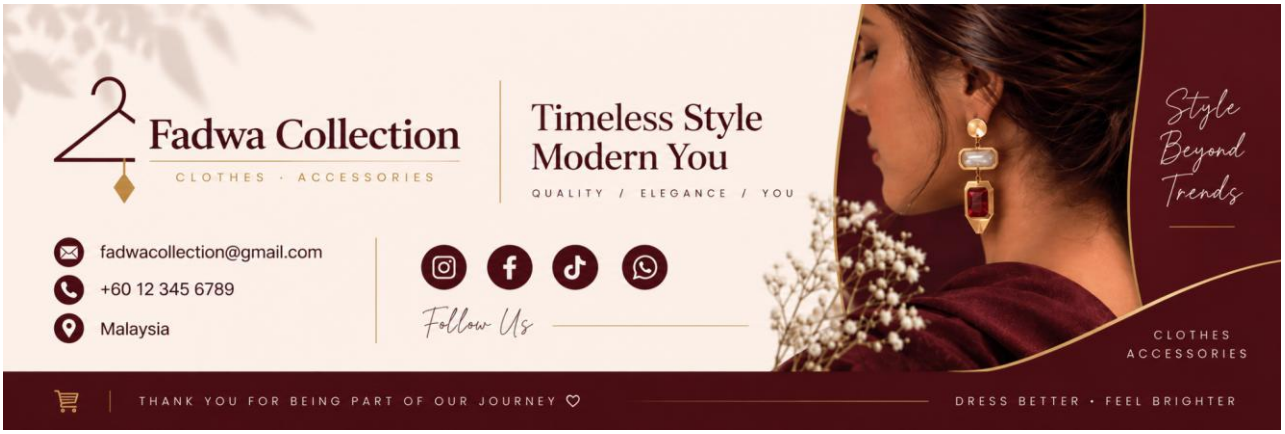

Website concept displayed in a realistic laptop environment.

Appendix D – Corporate Website Interface

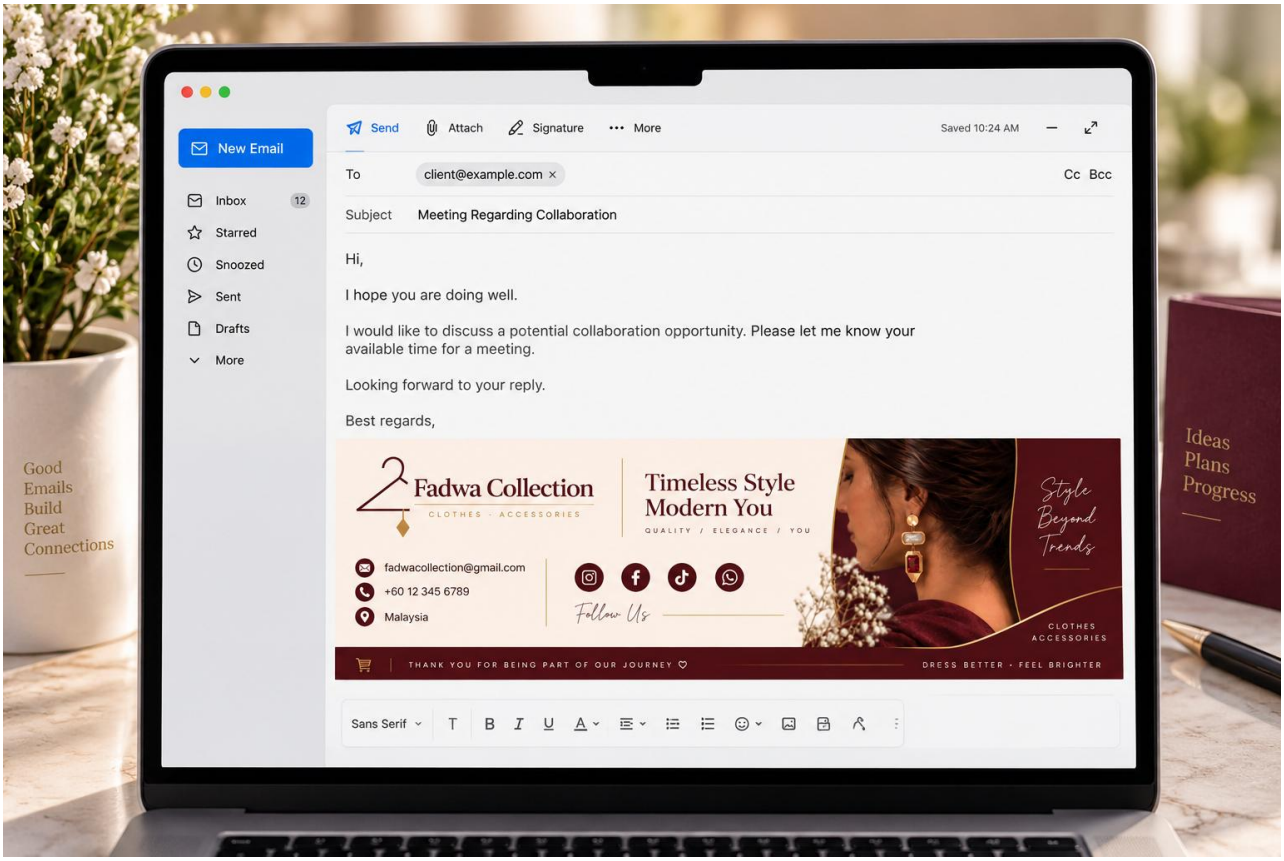

Proposed website homepage and product-category structure.

Appendix E – Email Signature Design

Branded email-signature/banner design.

Appendix F – Email Signature Mock-up

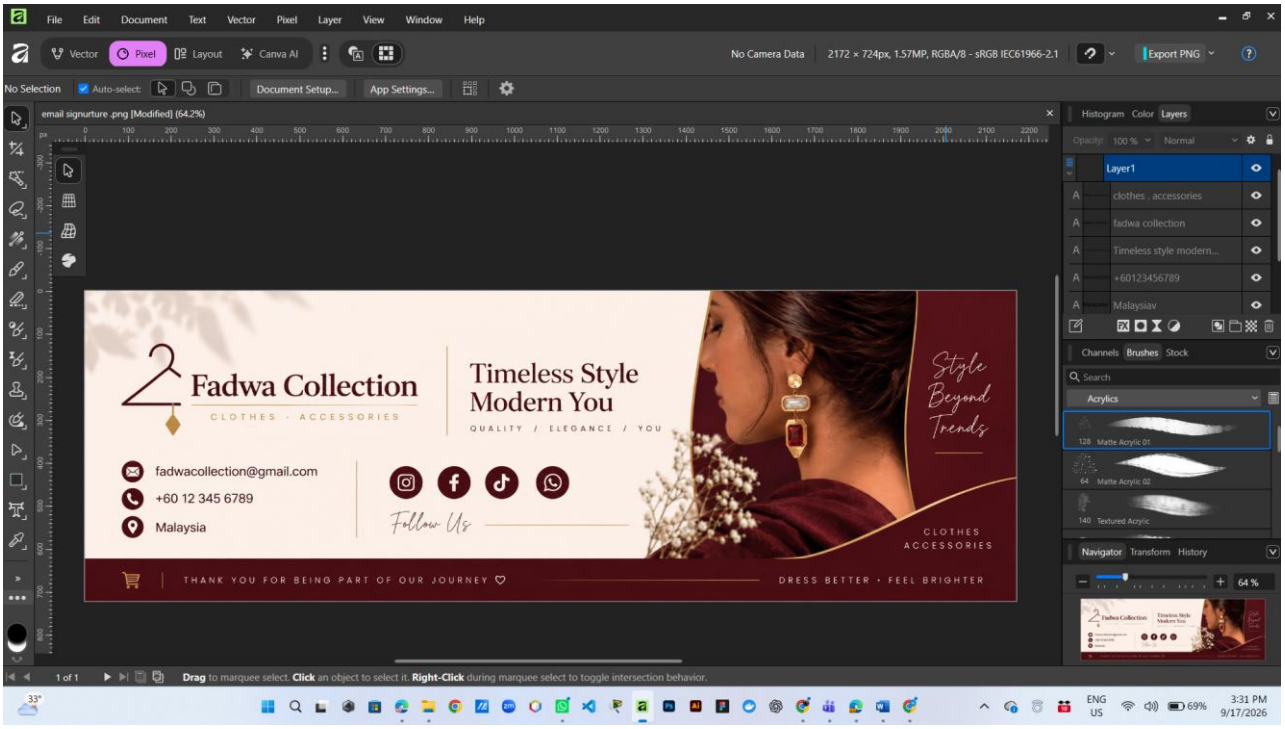

Email signature shown in a realistic email context.

Appendix G – Logo Development Evidence

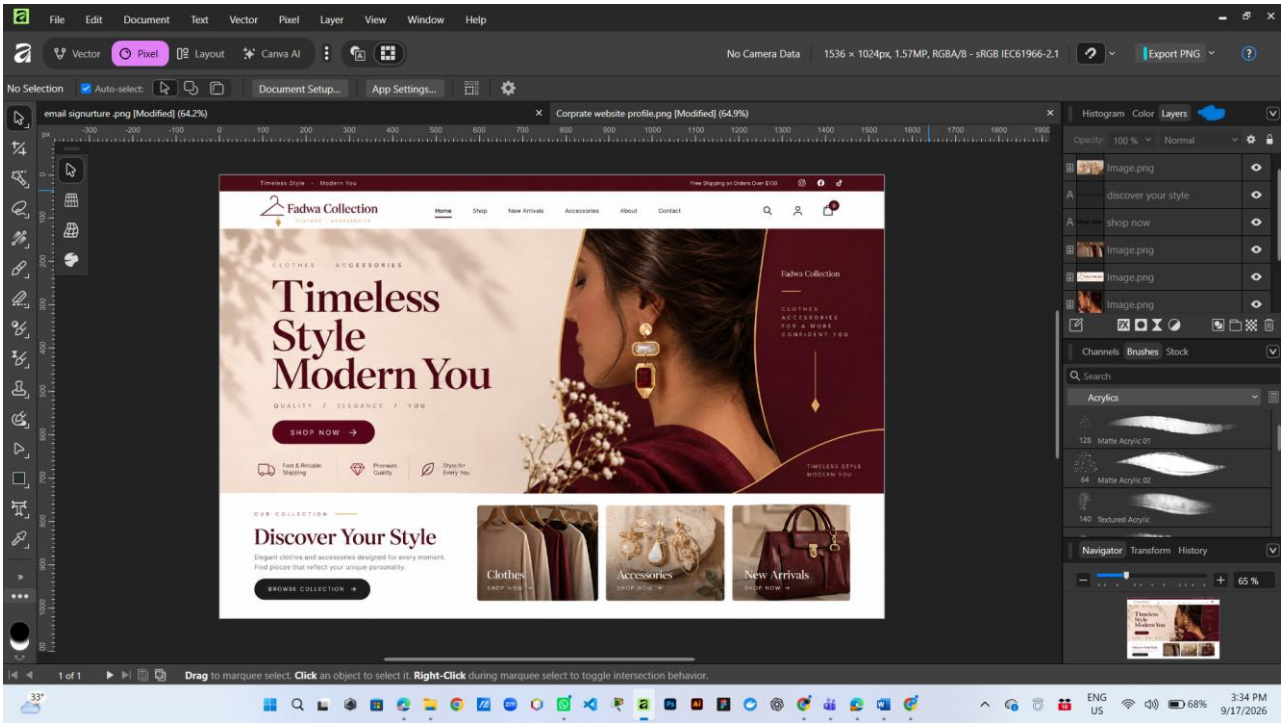

Photoshop working screen showing logo variants and brand-board development.

Appendix H – Email Signature Production Evidence

Affinity working screen showing the email-signature design and editable layers.

Appendix I – Website Production Evidence

Affinity working screen showing the corporate website design and editable layers.

Appendix J – Social Media Banner

Branded social-media banner design.

Appendix K – Social Media Mock-up

Fadwa Collection social banner applied to a Facebook page mock-up.
